Duke University School of Medicine
Masters of Health Sciences in Clinical Leadership (MHS-CL)
Summer 2020 Courses

CLP-215: Health Care Operations: Perspectives for Continuous Improvement

Students will develop a toolkit for continuous improvement within health care organizations and systems and will explore selected quality, ethical, and human resources issues in health care management. Students will apply concepts to practice using quality improvement parameters, ethics modeling, and analysis of case studies.

CLP-217: Community Engaged Approaches to Health Improvement

This course will provide an introduction to community engagement (CE), particularly community-engaged research, as a tool for health improvement. Students will gain an appreciation for the value of CE and its challenges. Students will gain basic skills in CE and will have an opportunity to strengthen those skills through a hands-on project. The course will provide students with the capacity and resources to continue to assess and develop their practice of community engagement.

Receive guidance from experts on operations improvement and community engagement

Distance-based program allows busy professionals to continue working full-time and to apply new skills immediately.

Courses are open to the degree-seeking student and the learner interested in enrolling in individual courses only.

Clinicians, health care administrators, faculty, staff, and graduate students searching for elective courses are welcome to participate.
